IEEE Student Branch STB15721**

Date: 10-02-2017

**SUB: REPORT FOR one day workshop on “Whyzbee – IOT applications” -REG**

WyzBee is a comprehensive Internet of Things (IoT) platform that includes hardware boards, application development environment, cloud software and services framework as well as a product synthesis solution for synthesizing the final product. The WyzBee IoT platform significantly reduces the time it takes to develop and bring to market new IoT devices by providing integrated sensing, computing, communication, power management, cloud and application support. In order to enhance the research and development activities in wide areas, the department of EEE of our college identified IoT as one area where there is an ample of scope for the R&D. Also Red Pine Signal Company launched “Whyzbee”- World's First Comprehensive IoT Platform for Device Makers in the year 2015.

In this context **IEEE IAS Students chapter and IEEE student branch** of our college conducted **a one day workshop with hands on experience on “ Whyzbee –IOT applications” by Redpine signals company, Hyderabad on 10-02-2017 from 9:00 am to 6:00 pm.** 39 (34 are IEEE members only) faculty from CSE, ECE and EEE participated in this event.

The following are the photo snaps of event.
